

Viope Python 3

The programming language for this course is Python 3.

In the beginning of the course the basics of Python language are introduced and the Python interpreter installation instructions are provided. After that, through basics of computer programming, the course continues to using modules, catching exceptions and data types. At the end of the course the object-oriented characteristics of Python are introduced.

The course includes 10 theory chapters, 42 programming exercises and 50 multiple-choice questions.

Table of contents:

<p>1 Regarding the course</p> <p>1.1 Python and the other programming languages 1.2 Using the Python interpreter 1.3 Getting to know the interpreter 1.4 The First Python progra</p>	<p>2 Fundamentals of the Python language</p> <p>2.1 Different printing techniques 2.2 Handling inputs 2.3 Editing strings</p>	<p>3 Conditional structure if-elif-else</p> <p>3.1 If-else 3.2 Indentation 3.3 If-elif-else 3.4 Logical expressions and Boolean values 3.5 Operators in Python 3.6 Simple conditional structur</p>
<p>4 Iteration and Iterative structures</p> <p>4.1 While-iteration 4.2 Example 4-1: While-iteration 4.3 For-iteration 4.4 Manipulating the iteration</p>	<p>5 External files in Python</p> <p>5.1 Using the files 5.2 Writing to a file 5.3 Handling data in a bit-state</p>	<p>6 Functions and subfunctions</p> <p>6.1 Observations regarding the subfunctions in use 6.2 Lambda-functions</p>
<p>7 Modules</p> <p>Creating own module</p> <p>10 Object-oriented programming and Python</p> <p>10.1 Creating a class 10.2 Class inheritance 10.3 Short introduction to the design patterns</p>	<p>8 Catching Exceptions</p> <p>8.1 Controlled takedown, Try-Finally 8.2 Self-made error classes and generating the error</p>	<p>9 Advanced datastructures</p> <p>9.1 List 9.2 Dictionary 9.3 Tuple 9.4 Set</p>
